your guide to
choosing colour
for aluminium
joinery

exquisite colours for aluminium joinery

This Colour Guide incorporates the very latest in powder coating technology coupled with the latest colours this technology makes possible. The colour range is chosen from old favourites and the very latest international colour trends and are arranged in a manner designed to make harmonious colour selection much easier.

Aluminium is the only warrantable substrate, but these powder coatings are equally at home on galvanised or mild steel.

powder coating warranties and the environment

DURALLOY® POWDERCOAT RANGE

- Extruded aluminium window & door joinery
- Residential and small commercial developments
- Building up to three levels above ground
- Properties greater than 100 meters from high tide level
- Where AAMA 2603 performance is desired
- Where a 10 year film and colour integrity warranty is required
- For projects outside these parameters, check with your Dulux® representative.

DURATEC® POWDERCOAT RANGE

- Extruded aluminium window & door joinery
- Prestigious residential and commercial developments
- All major architectural developments
- Properties greater than 10 meters from high tide level
- Welded aluminium sections greater than 100 meters from high tide level.
- Where AAMA 2604 performance is desired
- Where a 20 year durability warranty is required for film integrity (Colour integrity warranty will be less in duration and colour dependant).
- For projects outside these parameters, check with your Dulux® representative.

more inspired colour choice

The Duralloy® colours shown in this guide have been specifically chosen by Dulux for their exterior durability and fade resistance. Depending on the chosen colour, the finishes available are either matt or satin, in either solid or pearlescent as replicated in the colour choice sections that follow.

It is recommended when choosing powder coating, to decide on a colour that will compliment both the exterior and the interior of your home.

specifying exactly the right colour

On occasions, some colours, whether powder, paints or furnishings may share the same colour name but be entirely different. This is especially true of other powder suppliers who use Dulux® colour names for their products, but the colours rarely match. When choosing colours, remember to specify both the Dulux® colour code and colour name.

Every effort has been made to present these colours as accurately as possible and as close as modern printing processes allow. Colour appearance may vary according to light source. Where colour accuracy is vital, a powder coated panel should be requested to more accurately demonstrate the effect you should get.

roofing colour co-ordinates

In New Zealand a number of pre-coated steel options are offered for roofing.

The Duralloy® range incorporates a range of colours designed to harmonise with these colours, but it should be noted that the powder coating colour will never be a perfect match to the roofing colour.

A number of brands of pre-coated steel in New Zealand offer colours with the same names, including New Denim Blue, Permanent Green, Terracotta, Karaka, Ironsand to name a few, but as these colours are supplied by different paint companies and are wet paint as opposed to powder coating, the colours will always only be similar at best and may vary from brand to brand.

Please check with your roofing company to determine that the colour chosen is available in the roofing material desired and check their colour against the Duralloy® co-ordinate.

choosing

1. Consider the aspect of the room. If the light is warm, cooler colours are often the first choice. If the light is cool, warmer colours add coziness.
2. Think about how the room is to be used and the atmosphere you want to create.
3. Select your main colour. Use existing furnishings as a starting point.
4. Look at the balance of the colours. In general, light colours should be used in large areas, with deeper colours on a smaller area of the total room.
5. Think about using colours to change the shape of the room. Receding colours on a ceiling for instance will make the room feel taller, advancing colours will make the ceiling feel lower.

Disclaimer:

The colours in this brochure are indicative only. They are as close to actual product colours as modern printing techniques allow and they have been matched in natural outdoor lighting conditions. Colour appearance may vary according to light source.

® Dulux, Duralloy, Metropolis and Precious are registered trade marks of Dulux Powder & Industrial Coatings.

metallic/pearlescent finishes

The Premium Pearl offering utilises Dulux's Kinetic® Technology in both Duralloy and Duratec chemistry. The Kinetic® technology increases the ease of application and allows Dulux to present a finish that is not only very uniform, but also delivers a coating that has sparkle and movement in its appearance. This characteristic may mean that the appearance of the colour can change in different lighting and viewing angles or where the coated substrate is in several different planes.

Our Premium Pearls may be a little more expensive than your average run of the mill colour, but then these Premium Pearls are not your usual run of the mill colours.

b

black

The most powerful colour, although technically not a colour at all, black can conjure up images of mystery, or elegance and sleek sophistication. The strength of black is often emphasised by using it with white. Black and white tiles, or a high gloss black front door convey a universal message of style and sophistication.

r

red•light grey

Reds, Corals & Pinks are warm, vibrant colours that create a sense of intimacy and strength. Ranging from soft shades of coral and pink to bold, aggressive reds, these are colours that should be used with care. The paler tones are cheerful colours that reflect light to warm or brighten cool or dark rooms.

g

Grey which like black is a non-colour, is the true neutral, and thus risks being bland and uninteresting. However, when the right tone is selected, anywhere from charcoal or slate through to soft dove, grey can be an ideal backdrop or accent in practically any colour scheme.

green

Currently the most popular decorating colour, green symbolizes nature. It is the easiest colour on the eye and can improve vision. It is a calming, refreshing colour. People waiting to appear on TV sit in "green rooms" to relax. Hospitals often use green because it relaxes patients. Dark green is masculine and conservative. Greens can be fresh & fruity, acid lime or warm and relaxing olives.

mannex

The Duralloy Mannex® range has been designed especially for entrance doors, to add an extra little pizzazz to an area that is often a feature in terms of colour and design.

The Duralloy® Mannex® Range have been specially formulated as a tactile textured finish, that plays with the light and gives depth and interest to the surface. These specially chosen finishes have been formulated to be a hard durable film that displays a depth of character in the textured finish but also resists scuffing. With entrance doors often protected from the weather, rain seldom strikes the surface so new technology has been embodied in the Duralloy® Mannex® range giving the powder coating easy clean properties.

Accent

The range of accent colours have been added to the Duralloy range as demand increased for colours brighter than the usual range of colours offered, colours that could be used to compliment the overall colour scheme.

Whilst these colours may be used for joinery, the accent range was initially used for architectural features, such as entrance doors, aluminium louvres and panels.

performance and quality assurance

Dulux Powder & Industrial Coatings, manufacturer of Dulux branded powder coating, is committed to providing products that strictly adhere to the ISO standard for quality management. The result is a range of powder coatings, that simply work better in New Zealand's unique climatic conditions.

our two level performance guarantee

1. The first covers film integrity, which is a warranty that the film will not peel or crack or flake, when applied by a Dulux Registered Applicator. The Duralloy products in this guide can carry a warranty of 10 years film integrity, the Duratec products 20 years film integrity on extruded aluminium.
2. Secondly, and one most customers assume is warranted, colour performance. This is simply the ability of the coating to retain its colour and performance within stated parameters for a given period.

The Duralloy products featured here all have a colour performance warranty of 10 years, the Duratec products 15 years, when applied to residential and commercial aluminium sections by a Dulux Registered Applicator.

Dulux registered applicators

All the warranties offered by Dulux® in this booklet are conditional on the powder coatings being applied by Dulux Registered Aluminium Applicators. These applicators are only certified after demonstrating their capability to meet stringent quality conditions and international standards.

Each registered aluminium applicator has invested heavily in their business to guarantee their performance in preparing the aluminium and applying the premium Dulux® finishes shown in this guide.

care & maintenance

To comply with warranty requirements and to extend the effective life of powder coatings, a very simple regular maintenance programme should be implemented.

- 1 Carefully remove any loose deposits with a wet sponge.
- 2 Use a soft brush (non abrasive) and a mild household detergent solution to remove dust, salt and other deposits.
- 3 Rinse off with clean fresh water.

Do remove obvious deposits as they occur.

Do mask windows if painting.

Use only Methylated Spirits, Isopropanol or water to remove fresh paint splashes, **Do not** subject your joinery to over vigorous rubbing.

Do not use abrasive-steel wool, scrapers, scouring liquids or powders to remove paint splashes - these will damage your powder coating.

Do not use aggressive solvents-thinners, petrol etc. these solvents will attack gloss levels and reduce the powder coatings life expectancy.

Do not expose your joinery to excessive heat- heaters or hot air guns - these may damage the powder coating.

If through some misadventure your powder coated aluminium joinery is scratched or damaged, don't panic. Dulux® colour Repair Kits are available.

Do contact Dulux® Powder & Industrial Coatings on 0800 800 975 for further information or advice.

take care at installation time

Your window manufacturer puts considerable effort into protecting your powder coated joinery right through to installation time, however it is at this time that your joinery is perhaps most at risk of damage. For this reason your window manufacturer uses stickers, recommended by the Window Association of New Zealand, to help to protect their product.

WARNING
All Trades

This valuable joinery and glass will suffer permanent damage from

Plaster Splashes & runoff
Mortar Splashes & runoff
Paint Splashes

Protect! - if mortar splashes occur, or contaminants such as sunscreen are present: **immediately** wash joinery with plenty of clean water. For paint splashes spot clean with methylated spirits and then wash with plenty of clean water.

Do not allow splashes to harden.
Do not use any other solvents.
Do not use scrapers.

Do not allow water runoff from plaster and any mortar to flow onto windows - **DAMAGE WILL RESULT!** Always fully mask with an approved tape, and tape all joinery until mortar is sealed and painted.

DO NOT REMOVE THIS LABEL until the final clean is completed. Removing this label before the final clean may void any applicable warranty. Homeowners should obtain a copy of the care and maintenance instructions from their window supplier.

For further information visit www.wanz.org.nz

All the activity on a construction site means that your window joinery may get knocked or scratched, splattered with mortar, plaster, textured coating or paint during the later stages of construction. Please ensure that your window and door joinery is masked at this time. It is far easier to prevent accidents than to try and correct them.

Should your joinery receive mortar or paint splashes see that these are removed before cure and follow the instruction contained in this colour card or in the Dulux® Powder & Industrial Coatings Use and Care brochure.
